I

Subject: reproductive health block

Course Book –Stage 5

M B CH B PHASE II

SULAIMANI UNIVERSITY _ MEDICAL COLLEGE

Academic Year: 2025-2026

Course Book

1. Course name	Reproductive health block
2. Lecturer in charge	Dr.Srwa J.Murad block leader 1- dr.rozhan yassin Khalil 2- dr.srwa jamal murad. 3- dr. Sallama Kamel Nasir 4- dr. Chro Najmaddin Fattah 5- dr.maryam bakir mahmood 6- dr. Huda Muhaddein 7- dr. Rezan abdulrahmanali 8- dr.Naz azad abdulla 9- dr. Shayan Jalal Khalaf 10- dr. Dalya Dler Nuri 11-dr. Massooma Mahmood Mohammed 12-dr.soma tahir 13-dr.Mahabad Abdalaziz Mirawaiy
3. Department/ College	BCS /MEDICINE
4. Contact	e-mail srwa.murad@univsul.edu.iq Tel:07701586186

5. Time (in hours) per week	Every day except Friday,saturday 3 hours theory every day for 5 weeks 3 hours small group teaching every day for 5 weeks
6. Office hours	
7. Course code	
8. Teacher's academic profile	
9. Keywords	Obstetrics emergency, menstruation, genital tract malignancy, early pregnancy disorders ,labour,infertility ‘malpresentation,puberty, caesarean section
10. Course overview: At the end of the block a report will be made to the Medical School as to whether each student has: . 5 weeks theory lectures . 5 weeks practical session at maternity teaching hospital	

- . OSCE examination at end of the course
- . seminar presentation and case scenario discussion daily
- . attendance of skill lab in medical college / sulaimani university
- Attended all timetabled sessions; and other clinical sessions as appropriate
- Completed the required tasks defined in the block workbook
- Satisfactorily completed in-block summative assessments, including consultation skills and knowledge-based assessments.
- Demonstrated professional attitudes and behavior
- . At end of the year paper 1, paper 2 examination with integrated question.
- . final OSCE exam at each course block final.

The Phase 2 Board of Examiners, or a sub-group of it, will review the block reports and progress of each student at regular intervals, and define appropriate action in the case of students who do not complete all aspects of block assessment satisfactorily.

11. Course objective:

To achieve the course objectives, you should take advantage of the following learning opportunities:

- Clinical teaching offered at your designated teaching unit, ward work and on-calls.
- Participation in the clinical work of your team and taking advantage of educational opportunities as they arise during your course.
- Orientation lectures in the first 5 week of the course, and any structured teaching offered at your designated unit.
- Self-directed learning, including use of the Workbook and O&G web resources

12. Student's obligation :

The student are obliged to attend all theoretical lecture with active interaction by discussion and clinical debate, they also obliged to attend all practical session and participate by taking history, examination and post operative follow up.

13. Forms of teaching:

ONLINE GOOGLE CLASS ROOM

14. Assessment scheme

<i>EXAMINATION</i>	<i>Degree</i>
Summative exam at the end of the course	
Seminar presentation	
Final assessment	
Case scenario and single best answer	

15. Student learning outcome: By the end of the block the student should be able to:

1-Take a full obstetric, gynecological and sexual history considering physical, psychological and social aspects of women's health

1- Perform competently a physical examination of the reproductive system and related systems where appropriate

2 - Diagnose and date pregnancy

3 - Counsel patients about routine antenatal care and antenatal

screening and diagnosis

4 - Recognize and suggest management strategies for common problems in pregnancy

5 - Identify and participate in the management of life-threatening problems of pregnancy

6 - Manage normal labour, delivery and puerperium under supervision

7 - Identify and participate in the management of abnormal labour and puerperium

8 - Identify important causes of irregular, absent, painful or excessive menstruation, and suggest appropriate investigations and management strategies

9 - Identify common causes of acute and chronic pain (including pelvic pain and dyspareunia), vaginal discharge and genital ulceration and suggest appropriate investigations and management strategies

10 - Counsel patients regarding common methods of family planning and advise on prevention and diagnosis of sexually transmitted disease

11 - Identify common causes of male and female infertility and suggest appropriate investigations and management strategies

12 - Identify common causes of genital prolapse and urinary incontinence and suggest appropriate investigations and management strategies

13 - Recognize risk factors for gynecological cancer and counsel patients regarding appropriate screening programmes

16. Course Reading List and References:

Hamilton Fairly, D. Obstetrics & Gynaecology (Lecture Notes). Blackwell 2004 (ISBN 1405120665)

Obstetrics and Gynaecology at a Glance, (4th edition, 2013), Schorge, J.O & Norwitz, E., Blackwell Science.

Hacker and Moore's essentials of obstetrics and gynecology, (6th edition 2016), Neville F. Hacker, Joseph C. Gambone, Calvin J. Hobel, 5th ed. Saunders Elsevier.

Essential Obstetrics & Gynaecology (6th edition 2019), Symonds & Symonds, Churchill Livingstone.

Obstetrics by Ten Teachers, (19th edition, 2017), Kenny, L.C & Baker P.N., Hodder Arnold.

Gynaecology by Ten Teachers, (19th edition, 2017), Kenny, L.C & Baker

17. The Topics:		
THEORY LECTURES		

	Subject Title	Topics	Hours
1	Approach to physiological changes of pregnancy and endocrinology	Symptoms of pregnancy How to diagnose pregnancy Metabolic and endocrine change during pregnancy Cardiovascular change Fetal circulation	1
2	Approach to IUGR & IUD	Dentition of IUGR and difference between IUGR and SGA Diagnosis of IUGR Effect on Baby Management of IUGR Principle of management of IUFD	1
3	Approach to ANC & assessment of fetal wellbeing antenatally	Definition of ANC Component of ANC 1 st ANC visit Screening Organization of ANC	1
4	Approach to Prenatal diagnosis & genetic	Importance of prenatal diagnostic test Non invasive test	1

	evaluation & perinatal infections	Invasive test Genetic disease and its diagnosis Introduction of perinatal infection Viral infection Bacterial infection Mycobacterial infection Syphilis	
5	Approach to Normal labour	The definition of labour. • The stages of labour and associated physiological changes. • How to diagnose labour. • The maternal and fetal anatomy relevant to normal and abnormal labour. • How to manage women in labour (management of the three stages of labour). • How to monitor the progress of labour?	1
6	Fetal monitoring in labour	Introduction of fetal monitoring in labour. • intrapartum fetal hypoxia. • different methods of intrapartum fetal monitoring. • CTG interpretation. • How to manage suspected intra-partum fetal hypoxia.	1
7	Approach to Fetal malposition & malpresentation in labour.	• definition of the normal presentation and position of the fetus in labour. • definition of malposition and different types of mal-presentation in labour.	1

		•How to diagnose malpresentation and malposition of fetal head in labour. •The course of labour in malposition and mal-presentations in labour.	
8	Approach to breech presentation and transverse lie.	Definition of breech presentation. -Risks associated with breech vaginal delivery. -Antenatal management of women with breech presentation. -Criteria for allowing vaginal breech delivery. -How to manage labour with breech presentation -Definition of transverse and oblique lie. -Risks associated with transverse lie Management of transverse lie during pregnancy and labour	1
9	Caesarean section and operative vaginal delivery.	Definition of Cesarean section and its types of CS - indications of CS -complications of CS - taking care for post cesarean section patient Definition of operative vaginal delivery - a- Types of operative vaginal delivery - b- The parts of each instruments - c- Describe indications, prerequisites and contraindication -Practice the procedure and taking consent from the patient	1

10	Approach to APH (Antepartum hemorrhage)	Definition of placenta previa, its risk factor and presentation -definition of the abruption placenta and its types and grades. - clinical difference between placenta previa and placenta abruption - clinical feature of antepartum hemorrhage as an important obstetric emergency - management of different cause of ante partum hemorrhage	1
11	Postpartum haemorrhage	PPH and degree of shock - types of PPH - management of PPH - strategies for prevention of PPH AMTSL	1
12	normal and abnormal puerperium and lactation	- normal and abnormal puerperium - physiology of puerperium - diagnosis and management of complication in puerperium period - physiology of lactation,	1
13	Approach to Diabetes in pregnancy	Definition of DM. antenatal care with neonatal outcome. understand the difference between type two and gestational and its screening and diagnosis	1
14	Approach to hypertensive disorders in pregnancy	classification of hypertension in pregnancy.	1

		risks associated with various types of hypertensive disorders in pregnancy. the pathophysiology of pre-eclampsia. clinical presentation of pre-eclampsia and the principles of management.	
15	Approach to Acute abdomen during pregnancy, GIT & Hepatic Approach to abdominal pain in pregnancy	common GIT problem and liver disease and early diagnosis with best neonatal outcome and early diagnosis of acute abdomen early and late pain related to pregnancy and surgical cause and those benign cause	1
16	Approach to Disorder of blood coagulation & thromboembolic disease	- hematological changes in normal pregnancy - Predisposing and risk factors to VTE and its epidemiology during pregnancy - Management and prevention of VTE during pregnancy normal haemostasis & the vascular tree - Action of fibrinolytic system during pregnancy - bleeding disorders and their course during pregnancy - Diagnosis and management of thrombocytopenia during pregnancy and its causes	1
17	Approach to Anaemia in pregnant woman	Background information ☛ Diagnose anemia in pregnancy ☛ effect on mother & fetus ☛ prevention of anemia	1

		☛ supplementation of oral iron during pregnancy • Management of anemia during Pregnancy	
18	Approach to Preterm labour & PROM	Definition of Preterm labour and PPRM. - role of Tocolysis in improving neonatal outcomes. - Antenatal steroids reduce the risk of RDS. - Screening with transvaginal ultrasound risk of preterm delivery. -Cervical cerclage. - Risks and complication of PPRM - How to deal with preterm	1
19	Multiple gestation	classification of multiple pregnancies. - risk factors for multiple pregnancies and why prevalence is increasing. - complications that occur in multiple pregnancies. - antenatal care of women with multiple pregnancies	1
20	Rh iso-immunization during pregnancy	pathophysiology of Rh iso immunization - causes , risk factors and complications of Rh iso immunization - management of Rh disease of sensitized women - prevention of Rh disease -complications associated with our current management of Rh	1

		isoimmunization.	
21	Approach to Respiratory disease, heart disease, renal disease, Thyroid , pituitary & adrenal	medical conditions in pregnancy in relation to maternal and infant health. counselling and improving pregnancy outcomes. common medical conditions such as hypertension, kidney disease, cardiac disease and diabetes on pregnancy.	1
22	Approach to Post term pregnancy & induction of labour	• Definition of post-term and prolonged pregnancy. • Maternal and fetal risks associated with prolonged pregnancy. • Antenatal management of woman with prolonged pregnancy. • Definition of induction of labour. • Indications and contraindications of IOL. • Different methods of IOL. • Risks associated with IOL	1
23	Thrombocytopenia & bleeding disorders during pregnancy	Causes of Thrombocytopenia effects of thrombocytopenia on the fetus and pregnancy outcome.	1
24	Imaging in obstetrics & Gynecology	Different type of imaging in Gynecology The role of imaging in diagnosis gynecological diseases	1
1	Approach To Normal And Abnormal Development Of Genital Tract	sexual differentiation and development in early embryonic life.	1

		- the embryonic development of the perineum, the vagina, cervix and uterus, the adnexa and ovary and the bladder and ureters. - the structural anomalies resulting from Müllerian tract disorders	
2	Approach To Puberty , Disorders Of Sex Development And Childhood Gynecological Disorders	- normal changes of puberty and the secondary sexual differentiation that accompanies it. - classification and causes of abnormal puberty and disorders of sexual development (DSD). - common childhood gynecological problems.	1
3	Approach To Dysmenorrhea And Premenstrual Tension	-causes, investigation and treatment of dysmenorrhoea. -management of premenstrual syndrome (PMS).	1
4	Approach To Primary And Secondary Amenorrhea	- difference between the primary and secondary amenorrhea. • etiology, investigation and the management of primary and secondary amenorrhea	1
5	Endometriosis and Adenomyosis.	-Definition of Endometriosis . -etiology, pathophysiology and progression and to its recognition... -Adenomyosis. - Management of endometriosis	1
6	Operative Gynecology	- pre-operative assessment for any gynecological operation.	1

		-different types of gynecological operations. -post operative care	
7	Approach to Obstetric analgesia & anesthesia	The effects of analgesia during labour Benefit of spinal anesthesia -Types of analgesia	1
8	Approach to Pelvic infection & STD	The natural defence mechanisms against genital infection. - The conditions that predispose to genital infection. - What is pelvic inflammatory disease? - causes of PID. - Pathological changes of PID. - Clinical presentation and diagnosis of PID. - Complications of PID, treatment of PID	1
9	Approach to miscarriage	- types of miscarriage - symptom and signs of different types of miscarriage - counsel a woman with miscarriage and take a consent for different options in its management disease. - management of miscarriage : conservative, medical and surgical management of miscarriage	1
10	Approach to Ectopic pregnancy	-pathogenesis and the causes of ectopic pregnancy - symptoms and signs and different types of clinical presentations	1

		- diagnosis of ectopic pregnancy - management and follow up of different types of ectopic pregnancy	
11	Approach to H.mole & choriocarcinoma	• pathogenesis of GTD. • gynecological diagnosis and management. • monitoring and/or medical intervention. • clinical features of gestational trophoblastic disease. • management, evacuation of molar pregnancy & follow up	1
12	Approach to Female infertility, Male infertility	definition and causes of subfertility. • ovarian reserve. • history, examination and investigations relevant to subfertility. • management of infertility	1
13	IVF	- processes and procedures involved in assisted reproductive treatment (ART). - outcomes and success rates of	1
14	Approach to PCO & hirsutism	-pathophysiology of pcos . effects of PCOS on subfertility. . line of treatment . the long term effects of pcos on life and metabolic syndrome.	1
15	Approach to Family planning & Contraception	-mechanism of action of current contraceptive methods. -factors that affect contraceptive effectiveness. -non-contraceptive benefits of methods.	1

		- the use of medical eligibility criteria for contraception.	
16	Approach to Menopause & postmenopausal bleeding & HRT	-definition of menopause. • physiological and non-physiological menopause. • effect of menopause on women. • modifiable and non-modifiable aspects of menopausal health. • treatment of the menopause. • side-effects and the relative and absolute contraindications of hormonal replacement therapy (HRT). • the benefits of hormonal and non-hormonal HRT	1
17	Approach to Genital prolapsed & incontinence.	anatomy of supporting ligaments and fascia of the female pelvic organs. • mechanism of continence in women, • relationships between anatomical prolapse and functional symptoms, including urinary, bowel and sexual dysfunction. • assessment of the patient with incontinence or prolapse by means of history, examination and relevant investigations. • principles of urodynamic testing • treatment of prolapse and incontinence -potential side-effects and complications	1
18	Approach to Benign & malignant ovarian tumor	• types of benign ovarian cysts, their symptoms, diagnosis and treatment	1

		• presentation of malignant disease • ovarian cancer investigation and staging. • management of ov, cancer.	
19	Approach to Premalignant & malignant disease of the cervix	• risk factors for cervical cancer • presentations of cervical cancer -investigations for women presenting with cervical cancer • treatment options for cervical cancer	1
20	Approach to Endometrial carcinoma	-risk factors for endometrial cancer • investigation of postmenopausal bleeding • staging and the treatment modalities for the various stages • types of premalignant and malignant uterine pathology	1
21	Approach to Benign & malignant Disease of the vulva & vagina.	• risk factors associated with vulval cancer • diagnosis of vulval cancer • stage of the disease • multidisciplinary team • counsel patients regarding the treatment and adverse effects • follow up	1
22 23	Antiphospholipid syndrome Recurrent miscarriage	Causes and pathophysiology Causes and how you manage	

Reproductive health block theory time table

18. Examinations:

1. Exams consisting of single best answers a,b,c,d

Regarding these examinations, a short sentence about a particular subject will be given to students, who will respond by revealing if the information put across single best answer.

2. case scenario:

These types of examination questions give details clinical scenario and some question should be integrated ,students should answer as best single answer a,b,c,d?

19. Peer review

This course book has to be reviewed and signed by a peer. The peer approves the contents of your course book by writing few sentences in this section.

(A peer is person who has enough knowledge about the subject you are teaching; he/she has to be a professor, assistant professor a lecturer or an expert in the field of your subject).
